

# Cotton: World Markets and Trade

## Cotton's Share of Global Consumption Falls Further to Man-made Fibers

Source: International Cotton Advisory Committee's World Textile Demand for cellulosic and synthetic fibers; USDA PSD for cotton.

Note: For cotton, calendar years equate to the first year of the marketing year split, for example, 2023 reflects 2023/24 global consumption. Cellulosic fibers are also referred to as artificial fibers in global trade statistics and the Harmonized System (HS).

Cotton's share of global fiber [consumption](#) continues to decline, owing to substantial growth in the production and consumption of synthetic and cellulosic fibers (both also referred to as man-made fibers (MMFs)).<sup>1</sup> 2024/25 global cotton consumption is forecast at 115.2 million bales, near the 10-year average and more than 9.0 million bales below the record level witnessed 4 years ago. This is despite record global fiber consumption in calendar year 2023 as synthetic fibers are meeting the world's growing demand. China has been the main supplier due to unprecedented capacity and competitive prices. Lastly, stagnant growth in cotton production has also pressured cotton consumption.

According to a [report](#) published by Textile Exchange last month, polyester has been the primary driver behind the growth in global synthetic fiber production. Production rose 8.0 million tons year-over-year (equivalent to nearly 37.0 million bales) to 71.0 million tons in 2023; annual production growth was roughly one-third of the world's annual cotton consumption. Total synthetic fiber production was approximately 84.0 million tons (other fibers include nylon, polypropylene, acrylics, and elastane), showing that polyester makes up roughly 85 percent of synthetic fibers.<sup>2</sup>

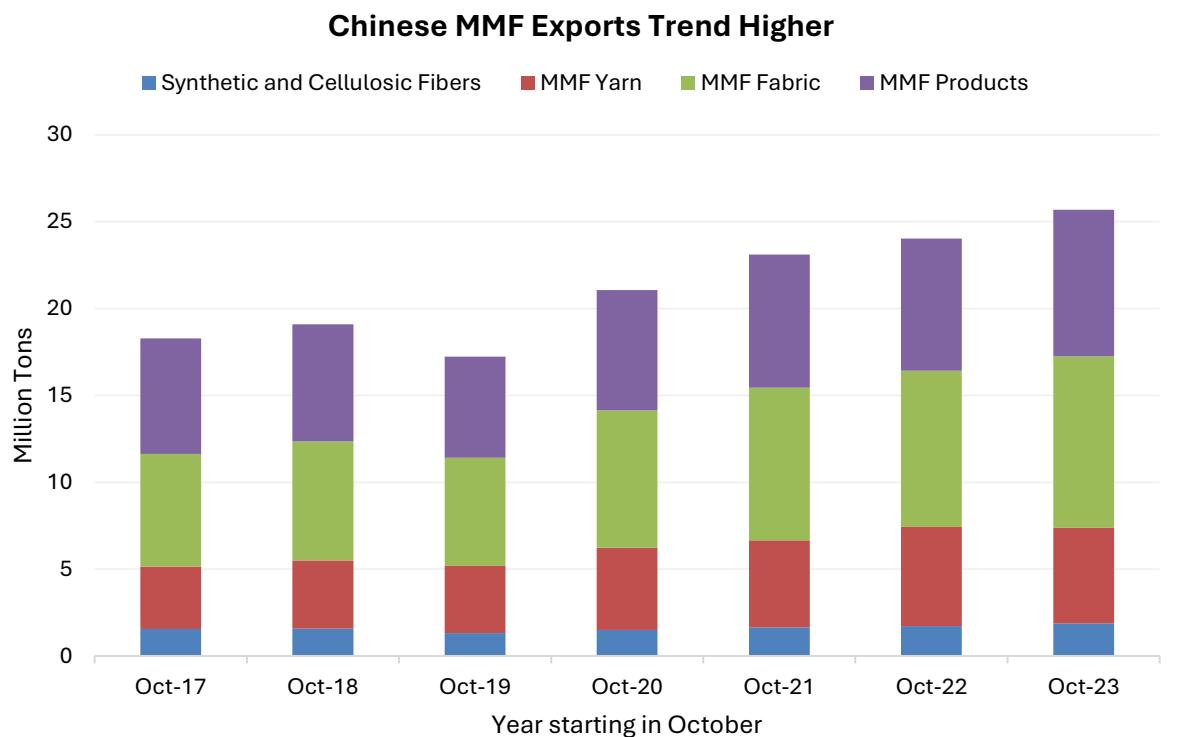

2023 global production of cellulosic fibers grew 500,000 tons (equivalent to 2.3 million bales) to 7.9 million tons, with rayon (also referred to as viscose) accounting for the majority at 6.3 million. Last week, the [International Cotton Advisory Committee](#) (ICAC) published their annual World Textile Demand report that reflected similar statistics, showing 2023 production of cellulosic fibers was more than 15 percent higher compared with 5 years ago. The steady production and consumption

<sup>1</sup> For synthetic fiber, both staple and filament. Cellulosic fibers are known as artificial fibers.

<sup>2</sup> See page 74 of the Textile Exchange report to observe approximate percentages of each respective fiber (including cotton) that is allocated between apparel, home textiles, and other. Polyester has a significantly higher percentage for the other category (e.g., industrial use) relative to cotton.

growth of both synthetic and cellulosic fibers contrasts with the stagnant, and at times, falling consumption of cotton fiber.

China has been the main driver of growth in synthetic and cellulosic fibers, with ICAC reporting the country produced nearly 70 percent of the world's synthetic and cellulosic (i.e., MMF) supply in 2023. Expanded capacity and supply of polyester has boosted China's dominance of the global textile industry, especially given polyester's lower price relative to cotton (see [here](#) for comparison of China's cotton price relative to MMFs). China's MMF exports – including fibers, yarn, fabric, and finished products – reflect substantial growth, with total volume growing over 40 percent over the past 5 years. From October 2023 to September 2024, Chinese MMF exports were nearly 26.0 million tons (equivalent to 118.0 million bales), a level that exceeds recent global cotton consumption.

	Oct-17	Oct-18	Oct-19	Oct-20	Oct-21	Oct-22	Oct-23
Synthetic and Cellulosic Fibers	1.6	1.6	1.3	1.5	1.6	1.7	1.9
MMF Yarn	3.6	3.9	3.9	4.7	5.0	5.7	5.5
MMF Fabric	6.5	6.8	6.2	7.9	8.8	9.0	9.9
MMF Products	6.7	6.7	5.8	6.9	7.7	7.6	8.4
<b>TOTAL</b>	18.3	19.1	17.2	21.1	23.1	24.0	25.7

Source: Trade Data Monitor, LLC.

Note: 12-month totals ending in September of each year. For example, Oct-23 represents exports from October 2023 – September 2024. When referencing trade data for MMFs, this analysis includes HS codes that specify synthetic or cellulosic as the primary fiber and typically state “of man-made”, “of synthetic”, or “of artificial” in the HS code description. Certain exports are not included that contain synthetic or cellulosic fiber, however, the MMF codes included can also be blended with other fibers including cotton. This potential blending does not pertain to the Synthetic and Cellulosic Fibers category.

Growth in cotton consumption has also been restricted by stagnant supply. Area harvested in 2024/25 is projected below the average level since the turn of the century, and cotton yields have recently witnessed little growth. Area has been restricted by competing crops, partly due to relative prices (e.g., cotton compared with corn and soybeans). As the competition with MMFs weakens demand for cotton and pressures cotton prices, this limits the potential for expanding area that would drive greater cotton consumption.

## 2024/25 Outlook

Production is forecast nearly 500,000 bales to 116.2 million on lower production in Pakistan and Turkmenistan. Global consumption is projected down more than 500,000 bales to 115.2 million on lower use in Turkey and Pakistan.

Global trade is projected down 300,000 bales to 42.2 million. U.S. exports are lowered 200,000 bales along with small downward adjustments to Uganda and Malawi exports. A 400,000-bale reduction in Turkey imports more than offsets a projected increase in Uzbekistan imports. Global ending stocks are forecast down nearly 600,000 bales on historical revisions to India and Turkmenistan production and lower Pakistan production in 2024/25.

The U.S. season-average farm price for 2024/25 remains at 66 cents per pound.

### 2024/25 Trade Outlook (1,000 480-lb Bales)

#### Major Importers:

	Previous	Current	Change	Reason
<u>WORLD</u>	42,476	<b>42,151</b>	<b>-325</b>	
Turkey	4,700	<b>4,300</b>	<b>-400</b>	Lower consumption

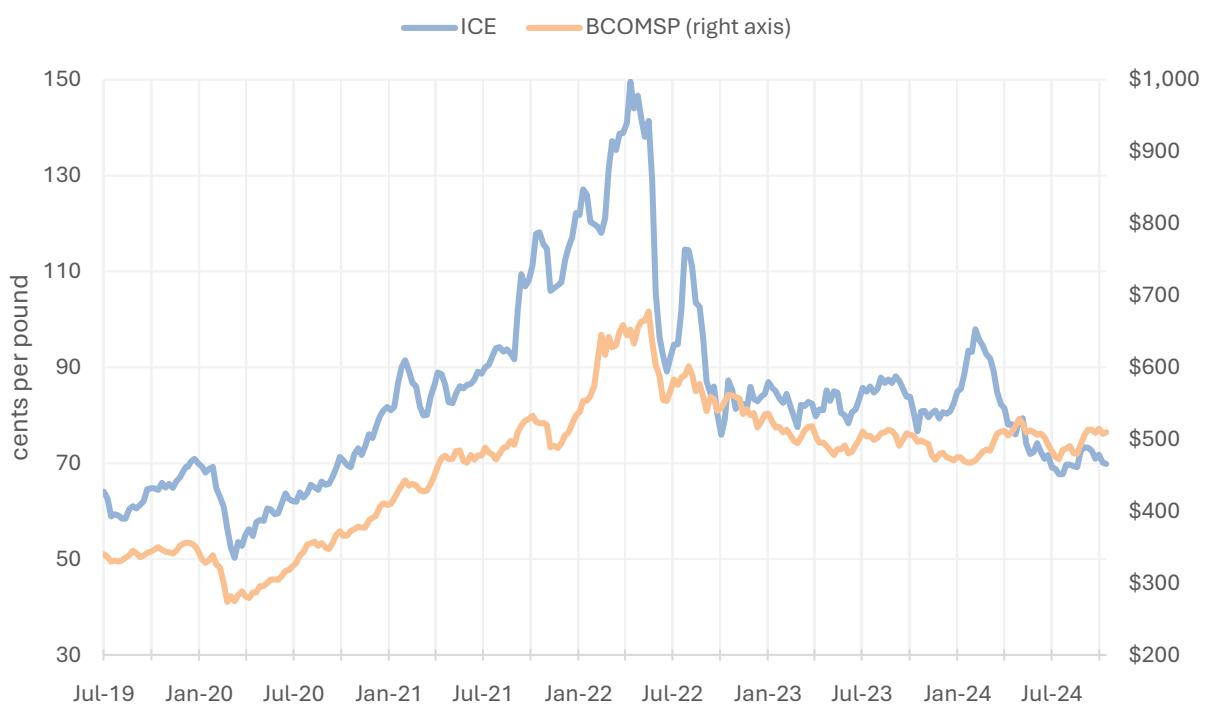

### **Major Exporters:**

	Previous	Current	Change	Reason
<b>WORLD</b>	42,471	<b>42,176</b>	-295	
<b>United States</b>	11,500	<b>11,300</b>	-200	Lower global demand

### **Futures and Spot Prices**

Since the last WASDE report, cotton futures on the Intercontinental Exchange (ICE) are mostly unchanged at around 70 cents. The latest Commodity Futures Trading Commission *Commitment of Traders* supplemental [report](#) for futures and options showed the net long position (as of October 29) for both Non-Commercial and Index participants falling slightly to around 34,000 contracts. Commodity prices (represented by the Bloomberg Commodity Spot Index) were also mostly unchanged. This is despite prospects for future U.S. federal interest rates to remain higher than expected compared with projections last month.

Weekly ICE Cotton Futures and Bloomberg Commodity Spot Index

Note: The Intercontinental Exchange nearby Cotton No.2 Futures contract is reflected and found [here](#). The Bloomberg Commodity Spot Index (BCOMSP) is listed [here](#). The index measures the price movements of futures contracts for various commodities. It does not account for the effects of rolling futures contracts, or the costs associated with holding physical commodities and is quoted in USD.

**Changes Since October WASDE** (cents per pound)

	A-Index	U.S.	China	India	Brazil	Pakistan
9-Oct	84.0	66.1	100.2	84.5	71.1	77.3
6-Nov	82.2	64.7	97.0	82.9	70.0	78.8
<b>Change</b>	<b>-1.8</b>	<b>-1.4</b>	<b>-3.2</b>	<b>-1.6</b>	<b>-1.1</b>	<b>1.5</b>

**U.S.** spot prices are mostly unchanged at around 65 cents per pound. Southeast basis rose to -350 basis points while North and South Delta climbed to -425. West Texas-Kansas-Oklahoma increased to -550, and average basis across the United States was up roughly 100 points to around -500.

**China** prices are down 3 cents to 97 cents per pound as the nearby futures contract (January) on the Zhengzhou Commodity Exchange (ZCE) fell slightly to around 14,100 per metric ton. Basis (relative to ICE) was unchanged at around 2,800 points.

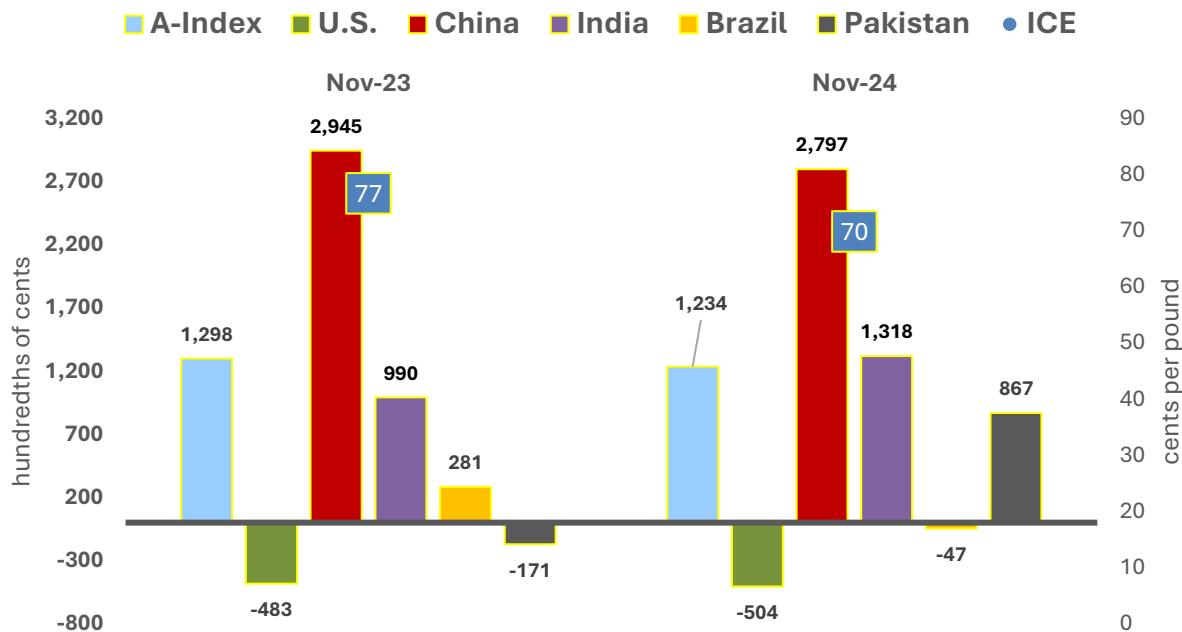

**India** prices are mostly unchanged at around 83 cents per pound. Basis was unchanged at around 1,300 points and remains above last year.

**Brazil** prices were mostly unchanged at around 70 cents and basis is unchanged at around -100 points.

**Pakistan** prices are up slightly to 79 cents per pound. Basis increased nearly 200 points this month to around 900 points, significantly higher than last year's level of -170 points.

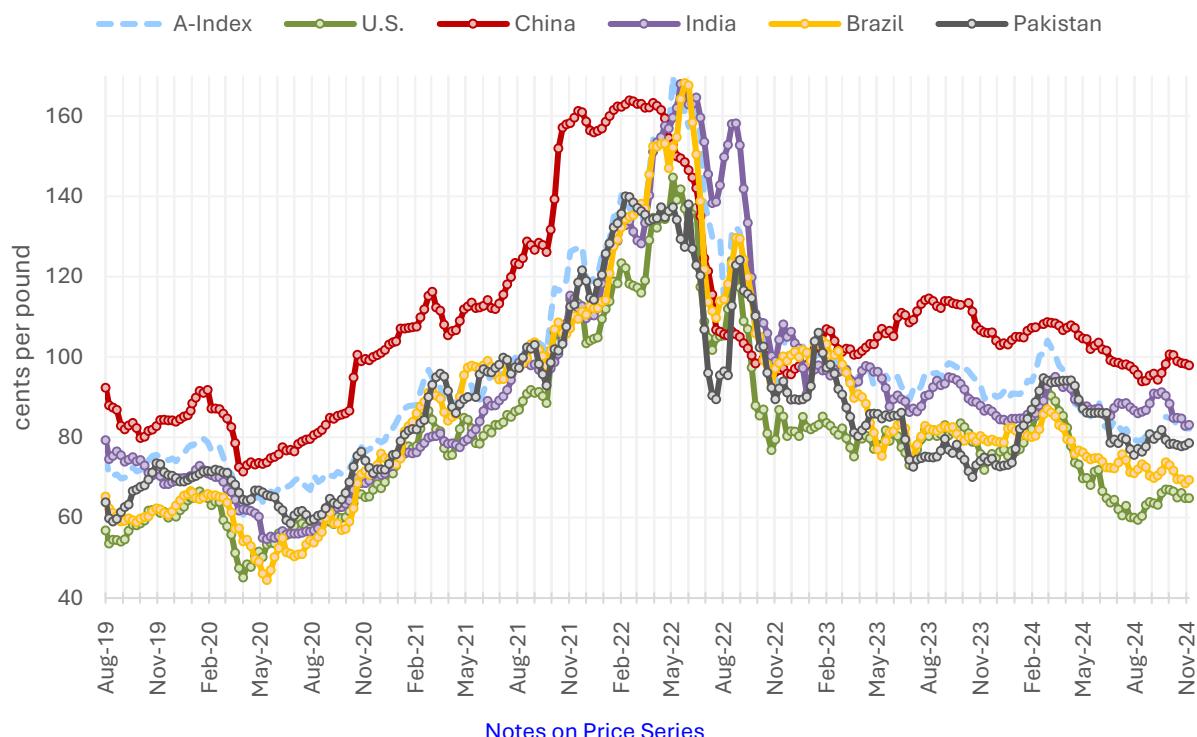

The observed **A-Index** this month includes the simple average of the following 5 quotes: Brazil, Memphis/Orleans/Texas, Ivory Coast, Burkina Faso, and Memphis/Eastern. Brazil is once again the lowest quoted origin at 78.50 cents per pound; Memphis/Eastern is the highest at 83.75 cents. The A-Index relative to ICE is roughly 12 cents higher and mostly unchanged from the previous year. Note the A-index includes the 5 *cheapest* origins of 'medium grade' cotton landed at a port in the Far East; quotations are compiled and published daily.

### Spot Quotation Minus ICE Futures (2023 vs. 2024)

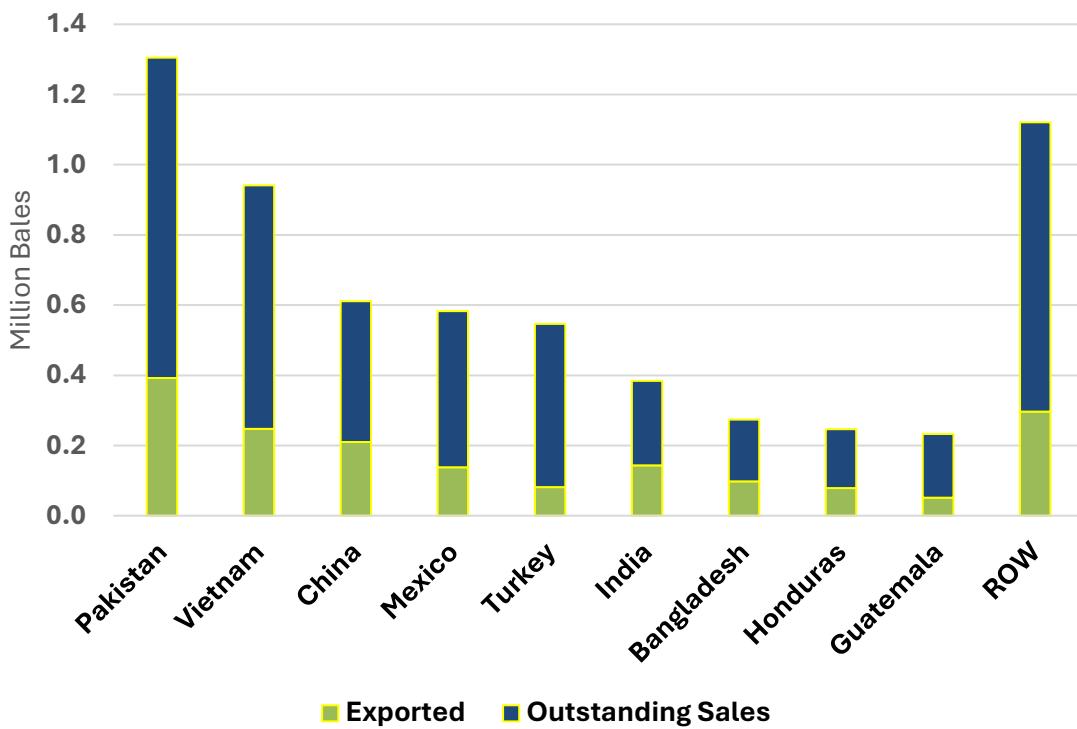

Notes: The chart visualizes a general value for basis (i.e., cash price minus futures). Quality and location (gin, port, textile mill, etc.) are significant in determining the quotation's relative value and basis, please see [Notes on Price Series](#) for more information.

### Weekly Cotton Prices

[Notes on Price Series](#)

## 2024/25 U.S. Shipments & Outstanding Sales (Aug. 1, 2024 - October 31, 2024)

Source: USDA FAS Export Sales Reporting (ESR); Note: ROW (Rest of World)

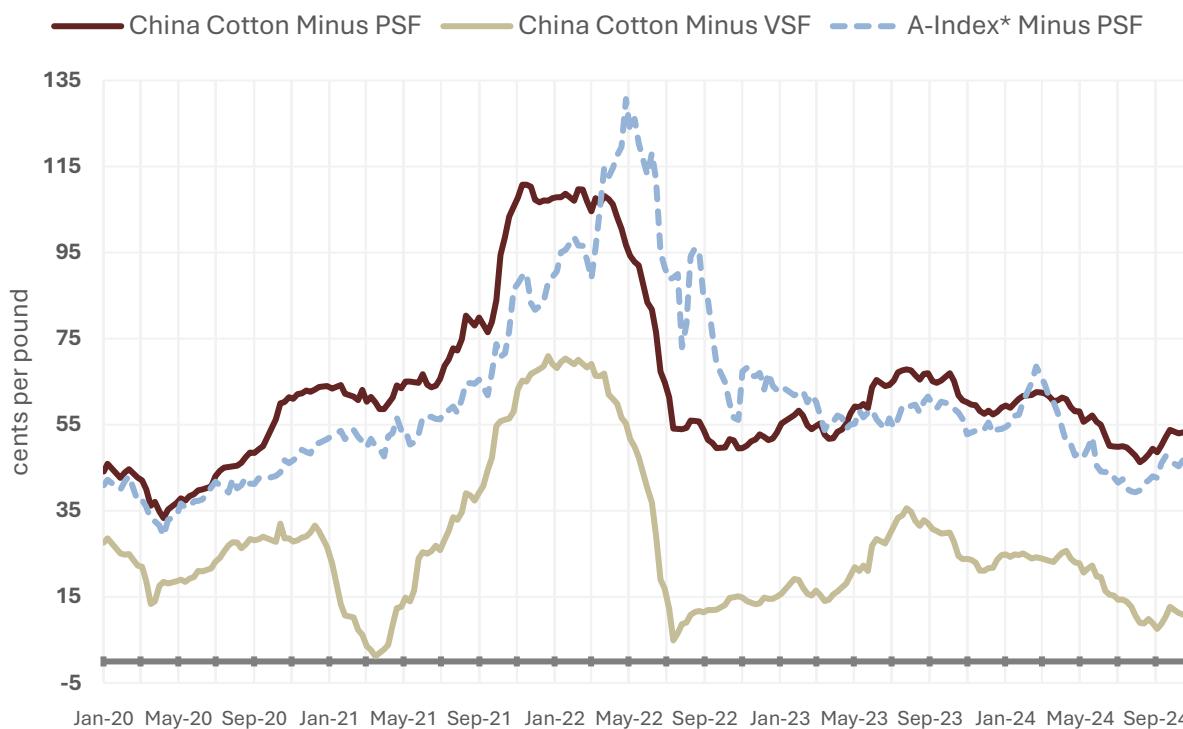

## China Cotton Yarn Futures Relative to Cotton

Note: \*A-Index is a customs-cleared estimate in China (including 1-percent tariff and 9-percent Value Added Tax). The cotton yarn and cotton futures prices used are the nearby contracts on the Zhengzhou Commodity Exchange.

A time series showing the difference in the futures price of cotton yarn and cotton lint is an indicator of potential changes in spinners' profitability and thus marginal changes in global cotton consumption. China yarn futures are included here because of the country's prowess as the largest cotton yarn manufacturer (i.e., cotton consumer) and importer of cotton fiber and yarn.

### Cotton Fiber Relative to Competing Fibers

Note: \*A-Index is a customs-cleared estimate in China (including 1-percent import tariff and 9-percent Value Added Tax); Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF). China Cotton is the spot price noted in the Price Series below.

A time series showing the difference in the spot price of cotton fiber relative to Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF) is an indicator of potential changes in spinners' incentive to increase their substitution of synthetic and artificial fibers for cotton. China is depicted here because the country is the largest consumer of all fibers. The A-Index is also included to derive the difference in price between imported cotton and competing fibers in China.

## Notes on Price Series

**A-Index** is published by Cotton Outlook and reflects the average of the five cheapest quotations (quality being middling 1<sup>1/8</sup> inch) of upland cottons traded internationally; the delivery price reflects Cost and Freight (CFR) to a Far Eastern Port.

**U.S.** is the simple average reported by the Agricultural Marketing Service, Free On Board (FOB) car/truck across seven U.S. spot markets of grade strict low middling.

**China** is the reported China Cotton Price Index (i.e., CCIndex 3128B) and reflects the national weighted average of middling grade cotton; the delivery price is at the textile mill in China.

**India** is the Shankar-6 (middling grade 29-3.8-76) spot price and is reported ex-gin (at the gin yard) in Gujarat.

**Brazil** is strict low middling and reflects the delivered price to a mill in São Paulo.

**Pakistan** is the ex-gin (at the gin yard) price in Karachi reflecting a 1<sup>1/16</sup> inch staple and grade 3.

## Production, Supply, and Distribution (PSD) Attributes for Cotton

(Note: Area Harvested is reported in thousand hectares and all other attributes in thousand 480-lb bale equivalents.)

**Marketing Year:** August – July, for example, the 2023/24 marketing year is August 1, 2023 – July 31, 2024.

**Area Harvested:** The area of land planted to cotton from which seed cotton is harvested.

**Beginning Stocks:** The quantity of cotton lint physically located within a country on August 1 (the first day of the marketing year, for example, August 1, 2023 of the 2023/24 marketing year) and includes cotton lint in transit. Beginning stocks equal the ending stocks of the previous year.

**Production:** The quantity of cotton lint ginned from harvested seed cotton during the marketing year and does not include cotton [linters](#) (short fibers attached to cottonseed).

**Imports/Exports:** The quantity of cotton lint physically imported into or exported from the country during the respective marketing year. This includes the Harmonized System (HS) code specific to the four-digit heading 5201 (Cotton, not carded or combed) and specific to unprocessed cotton lint. For some countries, imports include cotton bales in bonded warehouses that have *and* have not cleared customs.

**Domestic Use:** Also referred to as cotton consumption or mill use. All cotton lint that has been processed during the marketing year and excludes cotton linters. Domestic yarn production (100% cotton fiber or cotton blended with other fibers) usually accounts for more than 90 percent of domestic use. Yarn production occurs at a spinning mill and hence is also referred to as “spinning”. Use outside of yarn production typically includes nonwoven fabric production (see [nonwoven products](#)).

**Ending Stocks:** The quantity of cotton lint physically located within a country on July 31 (the last day of the marketing year, for example, July 31, 2024, of the 2023/24 marketing year) and includes cotton lint in transit. Ending Stocks will always equal the following year’s beginning stocks.

**Loss:** Cotton that has been destroyed or cannot be accounted for. Loss may also include “negative loss” when the estimates of Ending Stocks exceed the difference between **Total Supply** and total use (total use is equal to **Exports** plus **Domestic Use**).

### Other Terminology

**Cotton Textiles:** Refers to both the yarn and fabric industries. This mostly pertains to spinning mills (yarn manufacturers), weavers (woven fabric manufacturers), and knitters (knit fabric manufacturers).<sup>3</sup>

**Cotton Products:** Refers to end-use products including apparel and home goods (e.g., towels and bed sheets) as well as [nonwoven products](#) (e.g., medical and hygiene products). When referencing

---

<sup>3</sup> Dyeing operations can occur anywhere between the manufacture of yarn, fabric, and end-product but typically at the fabric mill.

“cotton product” trade data, certain imports are not included that contain cotton fiber. Circular analyses include HS (Harmonized System) codes that specify cotton as the primary fiber and typically state “of cotton” in the product code description.

**Garment Manufacturers:** Typically reflects cut-and-sew and finishing operations to assemble and produce the final end-products such as apparel (i.e., cotton products).

#### **Example of Cotton Supply Chain**

Cotton planted [**Farm**] → Cotton harvested [**Farm**] → Cotton ginned to separate lint from seed and compressed into bale (represented as Production in the PSD) [**Gin**] → Cotton bales spun into yarn or fibers processed into nonwoven products (represented as Domestic Use in the PSD) [**Spinning Mill**] → Yarn woven or knit into fabric [**Fabric Mill**] → Fabric is dyed and processed [**Fabric Mill**] → Finished fabric is cut-and-sewn into apparel or other finished product [**Garment Manufacturer**] → [**Retailer**]

The Foreign Agricultural Service (FAS) updates its production, supply, and distribution (PSD) database for cotton, oilseeds, and grains at 12:00 p.m. on the day the *World Agricultural Supply and Demand Estimates* (WASDE) report is released. This circular is released by 12:15 p.m.
